

A Glossary

This appendix describes the meaning of various terms in the context of a Planning Kit.

Term	Meaning
Case	A complete description of the input and output of a system (including choices from scenario's and strategies).
Future	A combination of the states of all scenarios and strategies that completely describes the inputs to the system. It does not include the output that is the result from these choices.
Measure	Distinct set of changes to the system that is applied as a whole (measure is active) or not applied (measure is not active).
Project	Synonym for Measure.
Scenario	Set of alternative choices which describe the future autonomous developments of the system. It is the combination of one or more ScenarioItems , each having one or more states from which the user may select exactly one.
ScenarioGroup	Set of related ScenarioItems and/or ScenarioGroups.
ScenarioItem	Part of a Scenario that has one or more states from which exactly one may be selected.
State	A distinct value a measure or scenario can assume. For measures the choices are limited to 'active' and 'inactive', scenario's can assume any number of states from one up.
Strategic Alternative	Set of coherent alternative choices that describe the measures and policies that influence the future development of the system.
Strategy	Short for Strategic Alternative.
