Tips:

- Team collaboration
  - Scattered seating.
  - No pairing / Sitting together.
  - Not everyone show up to stand-ups.
  - **Action:** We will try to arrange A-Wing for this and future projects. And have skype calls when people are away regularly.

- Issues not curated enough, test-data not available.
  - Missing domain / technical knowledge.
  - Hard to find the test-data.
  - Issues were not described correctly or reproduction steps were missing.
  - **Action**: new members should have a walk-through with the PO. And we encourage sitting together and asking freely for advise / help. Data will be moved to the repository (but not in the source code).

- DS-Frame issues solved as patches.
  - PO does not have security on new version fixing all problems.
  - **Action**: DS Architect should inform of new releases, new functionalities and bug fixes (release notes) as well as inform on impact for developers.

- WPF Wizard needs rework.

- Not having branches for new features.

- Confusing transition process.

Tops:

- Most issues were resolved.

- Developers retrospective.

- Team communication.

- Goals were met.

- The process was successful (no bottle necks) and thorough.

- Flexible team.

- Demo was broadly shared.
